எளிய தமிழில் Pandas Kaniyam.com

Pandas என்பது Python மொழி மூலம் வெள்ளமெனப் பெருகி வரும் தகவல்களை எளிதில் கையாள உதவுகிறது.

இந்த நூலைப் படிக்க, பைத்தான் மொழியின் அறிமுகம் அவசியம்.

பல்வேறு வகைகளில், வடிவங்களில் தகவல் இருப்பதால், அவற்றில் இருந்து தேவையான விவரங்களைப் பெறுவது கடினம். ஆனால் ஓஓஓ மூலம், தகவல்களை எளிதில் உருமாற்றி, அவற்றின் பின் உள்ள விவரங்களைப் பெற்று, முக்கிய முடிவுகளை எடுக்கப் பயன்படுத்தலாம்.

சென்னையில் நடைபெற்று வரும் மூன்றாவது 'தமிழ் கட்டற்ற மென்பொருள் மாநாடு 2023' ல் இந்த மின்னூலை வெளியிடுவதில் பெருமகிழ்ச்சி.

தமிழில் கட்டற்ற மென்பொருட்கள் பற்றிய தகவல்களை “கணியம்" மின் இதழ், 2012 முதல் வெளியிட்டு வருகிறது.இதில் வெளியான Pandas பற்றிய கட்டுரைககளை இணைத்து ஒரு முழு புத்தகமாக வெளியிடுவதில் பெரு மகிழ்ச்சி கொள்கிறோம்.

உங்கள் கருத்துகளையும், பிழை திருத்தங்களையும் editor@kaniyam.com க்கு மின்னஞ்சல் அனுப்பலாம்.

https://kaniyam.com/learn-pandas-in-tamil-ebook என்ற முகவரியில் இருந்து இந்த நூலை பதிவிறக்கம் செய்யலாம். உங்கள் கருத்துகளையும் இங்கே பகிரலாம்.

படித்து பயன் பெறவும், பிறருடன் பகிர்ந்து மகிழவும் வேண்டுகிறோம்.

கணியம் இதழை தொடர்ந்து வளர்க்கும் அனைத்து அன்பர்களுக்கும் எமது நன்றிகள்.

த.சீனிவாசன்

ஆசிரியர் உரை

பாண்டாஸ் பற்றிய என்னுடைய ஆசிரியர் உரையைத் துவங்குவதற்கு முன் ஒரு சின்ன பிளாஷ்பேக். அப்போதுதான் உங்களால் எதற்காக நான் இவ்வாறு எழுதியுள்ளேன் என்பதைப் புரிந்து கொள்ள முடியும்.

நான் கல்லூரி படிக்கும் போது Data Structures என்றொரு பாடம் உண்டு. அப்பாடவேளையின்போது Data)(என போர்டில் எழுதிப்போட்டு அனைவரையும் சிரிக்க வைத்துக் கொண்டிருந்தேன். ஆசிரியர் வருவதற்குள் அழித்து விடலாம் என்றே நினைத்தேன். ஆனால் அதற்குள் வந்துவிட்டார். போர்டில் Data)(என எழுதியிருப்பதைப் பார்த்து பொம்பள புள்ளங்க மாதிரியா நடந்துக்குறீங்க (அது மகளிர் கல்லூரி) எனத் திட்டிவிட்டு பாடம் எடுக்கத் தொடங்கினார்.

அன்று முதல் இன்று வரை Data Structure என்றாலே ஒரு நல்ல உடற்கட்டு வடிவம்தான் என் நினைவுக்கு வரும். இது வயதுக் கோளாறா அல்லது சினிமாவின் தாக்கமா என்பது தெரியவில்லை. வயதுக் கோளாறாக இருந்தால் அது இந்நேரம் சரியாகியிருக்கும். ஏனெனில் கோளாறு பிடித்த வயதை நான் எப்போதோ தாண்டிவிட்டேன். ஆனால் இப்போதும் கூட data structure அல்லது structure of algorithm என்பது போன்ற வார்த்தைகளைக் கேட்டாலோ அல்லது ஸ்ட்ரக்சர் எனும் வார்த்தையை வேறு எந்த ஒரு வார்த்தையுடன் தொடர்புபடுத்திக் கேட்டாலோ உடனே என் நினைவுக்கு வருவது ஒரு நல்ல உடற்கட்டு வடிவம் தான். ஆகவே தான் பல்வேறு டேட்டா ஸ்ட்ரக்சரைக் கையாள்வதற்கு உதவும் பாண்டாசைப் புரிந்து கொள்வதிலும் நான் இதே வழிமுறையைக் கையாண்டுள்ளேன். அதையே இங்கு ஆசிரியர் உரையாகவும் எழுதியுள்ளேன்.

மாடலிங், பளு தூக்குதல், டான்ஸ், அதெலடிக்ஸ் போன்ற பல்வேறு துறைகளில் ஜொலிக்க விரும்பும் பெண்கள், அத்துறைகளில் நேரடியாக களம் இறங்குவதற்கு முன்னர் முதலில் ஜிம் சென்று அவரவர் உடல்களை தயார் செய்வார்கள். அதே போல Big Data, Machine Learning, Data Analytics, IOT போன்ற பல ஜொலிக்கும் துறைகளில் பயன்படுத்தப்படும் தரவுகள் நேரடியாக களம் இறக்கப்படுவதற்கு முன்னர் அதனை நேர்த்தியாக வடிவமைக்க பாண்டாஸ் உதவுகிறது.

அதாவது பல்வேறு வடிவ அமைப்புகளில் ஜிம்முக்கு வரும் பெண்களை பிரத்யேக வழிமுறைகளைக் கொண்டு கையாண்டு தகுந்த உடற்கட்டுடன் அவரவர் விரும்பும் துறைகளுக்குச் செல்ல உதவும் ஜிம் போல, பல்வேறு வடிவ அமைப்புகளில் வரும் தரவுகளை பிரத்யேக வழிமுறைகளைக் கொண்டு கையாண்டு நாம்

பயன்படுத்துவதற்குத் தக்க வடிவமைப்பில் மாற்றி அளிக்க இத்தகைய பாண்டாஸ் பயன்படுகிறது.

ஜிம் என்பது எவ்வாறு ஒவ்வொருவருடைய வடிவ அமைப்புக்கும் ஏற்றவாறு cardio, jumping jacks போன்ற ஒருசில பிரத்தியேக முறைகள் மூலம் அவரவர் விரும்பும் வடிவங்களான zerofit, biceps, muscle strengthening, body building போன்றவற்றைப் பெற உதவுகின்றதோ, அதே போல பாண்டாஸ் என்பதும் ஒவ்வொரு வகையான தரவின் வடிவ அமைப்புக்கும் ஏற்றவாறு (1D 2D or 3D data, time series data, categorical data like that) ஒருசில பிரத்தியேக முறைகள் மூலம் (Series, Data frame, Panel) நாம் பயன்படுத்துவதற்குத் தக்க வடிவமைப்பில் மாற்றி வழங்கப் பயன்படுகின்றது.

Big Data, Machine Learning, Data Analytics, IOT போன்ற துறைகளில் புழங்கப்படும் தரவுகளை எவ்வாறு pandas மூலம் கையாள்வது என்பதற்கு தேவையான அடிப்படைகளை இப்புத்தகம் எளிமையாக வழங்குகிறது.

தொடர்ந்து ஊக்கம் அளிக்கும் என் குடும்பத்தினருக்கும், கணியம் குழுவினருக்கும், FreeTamilEbooks.com குழுவினருக்கும், வாசகர்களுக்கும் நன்றிகள்.

1 எளிய தமிழில் Pandas-1

Pandas என்பது தரவுகளை வைத்து பல்வேறு ஆய்வினை நிகழ்த்துவதற்கு உதவும் வகையில் தரவினைப் பல்வேறு வடிவங்களில் சேமிக்கப் பயன்படுகிறது. Series, Dataframe, Panel ஆகியவை பாண்டாஸ் பயன்படுத்துகின்ற தரவு வடிவங்களாகும். இவை முறையே ஒருபரிமாண இருபரிமாண மற்றும் முப்பரிமாண வடிவில் அமையும் தரவுகளை சேமிக்கப் பயன்படுகின்றன. எடுத்துக்காட்டாக நமது அரசாங்கத்தில் என்னென்ன துறைகள் உள்ளன என்பதை வரிசையாக ஒன்றன்பின் ஒன்றாக எழுதி சேமிக்க series-ஐப் பயன்படுத்தலாம் (1D data). அதாவது துறைகள் எனும் இந்த ஒரு பரிமாணத்தில் மட்டும்தான் தரவுகள் சேமிக்கப்படுகின்றன. அதுவே ஒவ்வொரு துறையிலும் எவ்வளவு பேர் பணிபுரிகின்றனர் (2D data) என்பதை சேமிக்க விரும்பினால் dataframe-ஐப் பயன்படுத்தலாம். ஏனெனில் துறைகள், பணியாளர்கள் எனும் இரண்டு பரிமாணங்களில் தரவுகள் சேமிக்கப்படுகின்றன.

இன்னும் விரிவாக ஒவ்வொரு மாநிலத்திலும் உள்ள பல்வேறு துறைகளில் எத்தனை எத்தனை பேர் பணிபுரிகின்றனர் (3D data) என்பதை சேமிக்க விரும்பினால் Panel-ஐப் பயன்படுத்தலாம். ஏனெனில் மாநிலங்கள், அதில் உள்ள துறைகள், அவ்வொவ்வொன்றிலும் உள்ள பணியாளர்கள் எனும் மூன்று பரிமாணங்களில் இங்கு தரவுகள் சேமிக்கப்படும்.

மேலும் எண்கள், சொற்கள், categorical data, time series data போன்ற எந்த வகையான தரவுகளாக இருந்தாலும் அவற்றை நாம் சேமிக்கலாம். ஒவ்வொரு தரவு வடிவத்திற்கும் தனித்தனியான பண்புகள் உள்ளன. அவற்றை அணுகுவதற்கும் பயன்படுத்துவதற்கும் பல்வேறு வழிமுறைகளும் விதிமுறைகளும் உள்ளன. இவற்றைப் பற்றியெல்லாம் இப்புத்தகத்தில் காண்போம்.

முதலில் pandas பயன்படுத்தும் தரவு வடிவங்களைப் பற்றி விளக்கமாகக் காண்போம்.

1.1 Data Types – Series, DataFrame, Panel

Series என்பது ஒரே வகையான தரவினை மட்டும் சேமிக்கப் பயன்படுகிறது. எனவேதான் இது dtype எனும் பண்பினைப் பெற்று விளங்குகிறது.

Dataframe [illegible]. [illegible] excel sheet-[illegible] row, column [illegible]. [illegible] column-[illegible]. [illegible] int [illegible]. [illegible] string [illegible]. display.max_rows : int
If max_rows is exceeded, switch to truncate view. Depending on
`large_repr`, objects are either centrally truncated or printed as
a summary view. 'None' value means unlimited.
In case python/IPython is running in a terminal and `large_repr`
equals 'truncate' this can be set to 0 and pandas will auto-detect
the height of the terminal and print a truncated object which fits
the screen height. The IPython notebook, IPython qtconsole, or
IDLE do not run in a terminal and hence it is not possible to do
correct auto-detection.
